HOW TO REVISE

CCEA Digital Technology

GLOSSARY DEFINITIONS

CCEA past papers indicate around 60-70% of the examination is going to be key term definitions.

Creating a clear list of key terms will be beneficial. Write these out hand written – don't type them.

Use a RED pen for the specialist terms as they appear (don't just highlight them after). Use a BLACK pen for the definition.

MIND HIVE

Similar to a mind map, but in this instance, you should start to see links between topics across the subject.

Use a pencil, put the main topic in the centre of the page.

Connect related facts and examples around it to show how ideas link together.

When developing this, think of how these points interlink with other topics. Eventually you will be able to draw a 'Mind Hive' which joins all of the topics together.

ONE PAGE SUMMARY

This is often called Cornell Notes, where you divide a single A4 page up into sections.

Section headers:

Key Terms | Diagrams | Concepts | Questions

Summarise your notes into each of these sections, reducing the booklet into a single page to remember.

WHAT DO I KNOW?

Use the old 'look cover write check' method with your notes.

On a single A4 side, write out everything you can remember about a topic using a BLACK pen.

Once you think you've written out everything you can remember, now open your notes.

Using a RED pen, add in everything you forgot.

Repeat this process until you have an entire A4 page with just black ink.

PAST PAPER QUESTIONS

Have a look at the past papers. These are hosted on the CCEA website.

Do this after you have learnt the topic. See where you have gaps in your knowledge and where you need to focus more on if there are questions you don't know yet.

COMPARISON TABLES

Create a table comparing two or more concepts, clearly identifying their similarities and differences.
